

Motion event descriptions in Standard Indonesian: An experimental study

Naonori Nagaya

The University of Tokyo

International workshop on the Malay varieties

December 1, 2019 @ ICLAA, TUIS

Questions

In this talk, I will look into descriptions of **self-motion** events in (Standard) Indonesian, focusing on two questions:

- Which meaning occupies the head (i.e., verb) position? **Manner?** **Path?**
- Do **different types of path** affect motion event descriptions?

And, I will examine its position in the framing typology:

- **Verb-framed pattern:** Path is encoded **in the head (= main verb)** of a sentence
- **Sentence-framed pattern:** Path is coded elsewhere
cf. Talmy (1985, 1991, 2000), Matsumoto (2003, 2017)

Data were collected through the NINJAL project of **Motion Event Descriptions Across Languages (MEDAL)**.

- A cross-linguistic experimental study led by Yo Matsumoto (NINJAL)

3

Prior studies

In the literature, Malay has been analysed as a “**verb-framing language**” (Huang and Tanangkingsing 2005:337; cf. Ibarretxe-Antuñano 2009).

- Based on frequency counts of frog stories

4

Why motion?

- ❖ Motion is a common basic event that people experience and talk about a lot.
- ❖ Motion is a complex event with alternative possibilities of expressions.
- ❖ Crosslinguistic variations can be seen w.r.t.:
 - How to map different event components onto units in a sentence?
 - What to code, and what not to code?

6

MEDAL project: Experiment C

❖ Characteristics:

- ▶ Production experiment
- ▶ Use of video clips on a computer screen
- ▶ Video helps speakers to be located in the scene

❖ Experiment C:

- ▶ Focus on the **differences among different paths**
- ▶ 44 video clips in total
- ▶ 2 manners x 14 paths
 - manner: **WALK, RUN**
 - path: **FROM, TO, TOWARD, PAST, VIA (+BETWEEN/UNDER), ALONG, AROUND, INTO, OUT, ACROSS, THROUGH, UP, DOWN**
- ▶ Additional clips for complex trajectories

11

Constructions employed for motion descriptions

❖ Common strategies for motion descriptions:

❖ Multi-verb constructions:

- ▶ Sbj + manner verb + path verb
e.g. *Seorang laki-laki berlari menaiki tangga*
- ▶ Sbj + manner verb + **dan/lalu** + path verb
e.g. *Seorang laki-laki berlari lalu menaiki tangga*

❖ Single-verb constructions:

- ▶ Sbj + manner verb + PP
e.g. *Seorang pria berjalan di sepanjang pinggir sungai*
- ▶ Sbj + path verb + PP

21

Frequency of Manner, Path, and Deixis

Either as a head or as a satellite element:

- ▶ **Path** is **always** expressed per clip.
- ▶ **Manner** is expressed **over 90 percent** of the time.
- ▶ **Deixis** is **never** expressed.

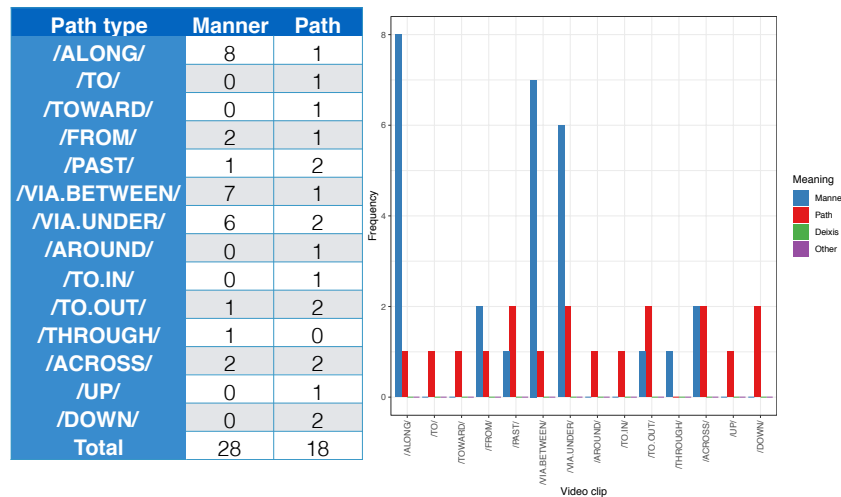

27

Construction type per Path type

Path.type	Singe	Multi
/ALONG/	75.0%	25.0%
/TO/	8.3%	91.7%
/TOWARD/	8.3%	91.7%
/FROM/	25.0%	75.0%
/PAST/	25.0%	75.0%
VIA.BETWEEN	66.7%	33.3%
/VIA.UNDER/	53.3%	46.7%
/AROUND/	8.3%	91.7%
/TO.IN/	8.0%	92.0%
/TO.OUT/	24.0%	76.0%
/THROUGH/	8.0%	92.0%
/ACROSS/	33.3%	66.7%
/UP/	8.3%	91.7%
/DOWN/	16.7%	83.3%

Frequency of M/P in single-verb constructions

30

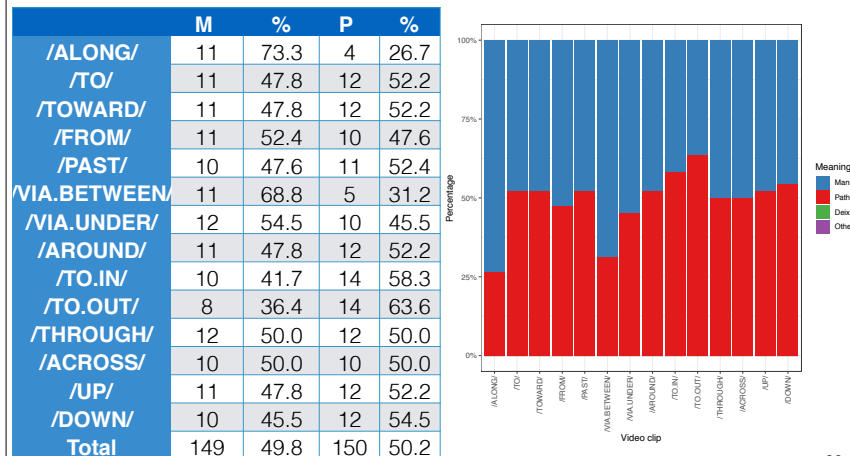

Frequency of M/P in multi-verb constructions

31

Meanings of verbs

Meanings of all verbs in both single- and multi-verb constructions:

32

Issue (I): Verb serialization (!?)

- ❖ How should we analyze the most common construction pattern?
What is **the head** in this construction?

- ▶ (ex) *Seorang laki-laki berlari menaiki tangga.*
- ▶ Is it a serial verb construction (like SVCs in Thai)?
- ▶ Is it a verb chaining (like Japanese *-te* construction)?
- ▶ Or is it a series of two separate sentences?

- ❖ Different analyses put Standard Indonesian in different positions in the framing typology:

Analysis	Framing typology
Verb serialization	Equipollent-framed
Verb chaining	Verb-framed/satellite-framed
Separate sentences	No event integration

34

Issue (II): V-language?

- ❖ In the literature, Malay/Indonesian has been considered as a **verb-framed language** (Huang and Tanangkingsing 2005, etc.):
 - ▶ **Path is coded in the main verb, while manner is subordinated to path** (like Japanese, Korean, Spanish, etc.
- ❖ But the results of the experiment show it may not be necessarily the case:
 - ▶ Manner (main) verbs appeared as often as path (main) verbs.
 - ▶ Standard Indonesian has a **multiple-verb construction**, which is usually associated with satellite-framed languages (cf. Slobin 1996, etc.)
(e.g.) *Seorang pria melompat dari atas meja ke bangku.*
A man flew from the table to the bench.
 - ▶ Also, look at this satellite-framed construction:
(e.g.) *Seorang laki-laki berjalan ke arah payung.*

35

Issue (iii): Variations in the encoding of Paths

- ❖ Different constructions are chosen for different Paths:
 - ▶ /ALONG/, / VIA.BETWEEN/, and / VIA.UNDER/ → Single-verb constructions
 - ▶ Other paths → Multi-verb constructions
- ❖ Indonesian speakers do not use these constructions randomly.

Issue (iv): Crosslinguistically rare features (!?)

- ❖ Some crosslinguistically rare features were found:
 - ▶ Compared to other languages investigated in the NINJAL MEDAL project
- ❖ [1] The Path TO is often lexicalized in verbs:
 - ▶ *Seorang laki-laki berlari menuju meja kecil di alun-alun.*
 - ▶ *ke* is not used for describing the /TO/ scene
- ❖ [2] The Path ALONG can be lexicalized in verbs:
 - ▶ *Seorang pria berjalan menyusuri sungai.*
- ❖ In other languages, these Paths are usually coded by prepositions rather than (main) verbs
 - ▶ Even in typical verb-framed languages such as Turkish and Spanish

40

Summary

- ❖ Observation:
 - ▶ Multi-verb constructions are most frequently used for motion event descriptions in Indonesian.
- ❖ I asked the two questions concerning motion event descriptions in Standard Indonesian:
 - ▶ Which meaning occupies the head (i.e., verb) position? **Manner?** **Path?**
 - No clear pattern.
 - It is difficult to categorize Indonesian either as verb-framed or as satellite-framed.
 - ▶ Do different types of path affect motion event descriptions?
 - Yes. The choice of construction types depends on Path types.
- ❖ Some crosslinguistically rare features are also found.
